

Perfection Down to the Last Detail

By ■ **optimizing the generator**, high efficiency and unsurpassed low no-load losses are achieved.

The ■ **high-quality bearings** ensure a long lifetime without maintenance.

The ■ **Pressure Compensation System** guarantees the best possible protection against the ingress of water and so prevents internal corrosion.

Our Philosophy

Our most important objective is to promote the bicycle as the most environmentally and people friendly means of transport. We are a team of 30 cycling enthusiasts working on this aim and manufacture SON products of the highest quality. In addition to a perfect, durable and economically successful product, the impact of our work on the environment, employees and customers is important to us. It goes without saying that our products are produced in an environmentally friendly way.

SON Hub Dynamos Electricity for Lighting and Charging

The pioneer of today's hub dynamos: For 30 years, owner and chief engineer Wilfried Schmidt, has striven to research and develop his products to make the perfect gearless hub dynamo.

Specifically designed for smooth running and longevity, a SON hub dynamo usually lasts a bike's lifetime and is worth its high price - whether it's a standard hub dynamo or one of our special versions for MTB, gravel bike, folding bike, cargo bike or recumbent tricycle.

versions for
Pedelects

Edelux II

The Edelux II design is elegant and reduced to the essential. Its 100 lux bright light distributes light evenly and widely, from close to far range and thus enables the very best vision on dark roads. The Edelux II has a bright standlight and an automatic switch. The aluminium housing and copper heatsink ensure optimum cooling of the LED, while the anti-reflective lens and potted electronics guarantee the renowned SON quality.

SON Rear Light

The SON rear light is small, robust and elegant – it fits to racks, seat-posts or mudguards. It has an anodized aluminium housing as well as fully potted electronics and optical parts – therefore watertight.

SON Coaxial Wiring

By only using the best wiring, our high-quality hub dynamo and the associated lights have become an extremely reliable lighting system. The **SON Coaxial Cable** was specially developed for this purpose and has been proven for decades.

The new **SON Coaxial Connectors** developed by SON are particularly convenient. They enable user-friendly, elegant and solid wiring solutions of all kinds.

Even more elegant and user-friendly: our „No plug at all“ **SON Self-Connecting System** (SL). Demanding bicycle manufacturers are using this solution more and more often in their top products.
